## 3D Printing

3D Printing, or "Additive Manufacturing", is the prototyping process where real objects are created from a 3D computer design.

### What is 3D Printing?

### What can it print with?

3D Printers can print with many different materials, including metals, plastics, ceramics, clay, edible materials, & much more!

Stereolithography, selective laser sintering, electron beam melting, fused deposition modeling, and laminated object manufacturing are some ways to 3D print.

### What technology is used?

### 3D Printers can make

clothing & jewelry  
prosthetic limbs  
phone accessories  
household items  
& so much more!
